Disclaimer

Please read all the contents of the manual carefully before using the products described in this manual to ensure the safe and effective use of the products. After reading, please keep this manual properly for the next time you use it.

Not disassemble or tear the sealed bidding of the scanner on your own, otherwise our company shall not assume the responsibility of warranty or replacement of the scanner.

The images in this manual are for reference only. If there are some pictures that Not match the actual product, please refer to the actual product. For the improvement and renewal of this product, our company reserves the right to modify the document at any time without notice.

The products described in this manual may include the copyrighted software of Xiamen Hanin Electronic Technology Co., Ltd. or a third party. Unless authorized by the relevant rights holder, no unit or individual can copy, distribute, modify, extract, decompile, disassemble, decrypt, reverse engineer, rent, convert, Sub-license and other infringement of software copyright.

Xiamen Hanin Electronic Technology Co., Ltd. has the final right of interpretation of this statement.

Change Record

Rev.	Date	Description
1.0	2021.06.16	--
1.1	2021.08.27	1. Add Vietnamese. 2. Add HID-POS interface setting. 3. Add Bluetooth base self sensing setting. 4. Add screen scanning mode. 5. Add Brazil special barcode encryption rule setting.
1.2	2021.12.9	The barcode length setting parameter is updated.

CONTENT

Chapter 1 Introduction

The scanner uses the class leading chip with intelligent image reading technology, and it mainly uses for image-based 2D scanner.

The scanner can read all kinds of 1D barcodes and standard 2D barcodes (various versions of PDF417, QR code, and Data matrix) can easily scan paper, plastic cards, LCD and other barcode printed media. Its fully integrated design makes it easy to embed in a wide range of product applications.

About Manual

This guide mainly provides various functional setup instructions for the scanner. By scanning the setup barcodes in this guide, you can change the functional parameters of the scanner, such as communication interface parameters, scanning mode, prompt mode, data processing and output, etc.

The scanner provides parameter configurations that are suitable for most used functions at the factory. And in most cases users can put them into use without making adjustment.

Barcode Read

In manual read mode, the procedure for scanning barcodes is as follows:

(1) Make sure that the scanner, data cable, data receiving host, and power supply are properly connected and turned on.

(2) Press the trigger to activate the light.

(3) Align the aiming line to the center of the barcode, move the scanner and adjust the distance between it and the barcode to find the optimal scanning distance.

(4) When hear the prompt sound, the infrared light goes out and the barcode reading successfully, then the scanner will decode the data to the host.

(5) All set barcodes are saved by power outage.

▲Note: For the same batch of barcodes, the scanner keeps a very high success ratio in certain distance which is regarded as the optimal scanning distance.

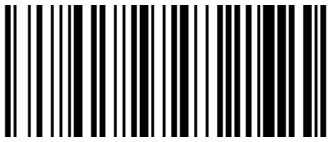
Use the Setting Barcode

Set the parameter to a special barcode whose barcode type is barcode128. When it scans to a barcode software that matches the setting type of setting, it will automatically enter the setting and does not send the results on the host. All set barcodes are saved by power outage. (except to restore factory settings)

▲Note: All bar codes with "*" in this manual indicate the default values of factory settings.

Restore Factory Defaults

▲Note: Please use the "Restore Factory Defaults" function carefully, and when you scan this setup barcode, the current parameter settings will be lost and replaced with the factory default values.



Restore Factory defaults

Read the Firmware Version

Chapter 2 Communication Interface

The Handheld Barcode Scanner provides USB and RS-232 interface (optional) to connect to the host. Through communication interfaces, it can receive and read the data, control the scanner by sending the commands, and modify the parameter of scanner, etc.

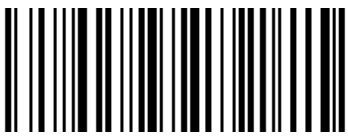
Serial Interface

Serial interface is a common way to connect the scanner to the host (e.g. PC, POS devices). The handheld scanner provides RS-232 electrical level interface, which can directly connect to PC's serial interface. When using serial interface, the scanner and the host should be completely match with each other on communication parameter configuration, to ensure fluent communication and correct content.

The default serial interface parameter is as below shown, when it is inconsistent with the host, it can be modified by Read Setting Barcode.

Parameter	Default
Type	RS-232 interface
Baud Rate	115200
Parity Type	None
Data Bits	8
Stop Bits	1
Hardware Flow Control	None

RS232 General Serial Interface



None*

Odd parity

Even parity

Baud Rate

The unit of Baud Rate is bps is bits/s (bps: bits per second), the optional configuration parameter is as below shown:

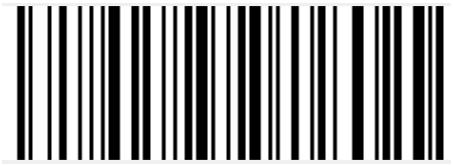
USB Virtual Serial Port

When the scanner uses a USB communication interface, but the host application uses serial communication to receive data, you can set the scanner to the USB virtual serial port. This function requires that be installed the appropriate driver on the host.

USB Virtual Serial Port Setting

HID-POS Interface

As an auxiliary interface, HID POS can send commands to the scanner through the USB HID POS interface. It can also connect the same Barcode Scanner as a USB serial device, and then receive data and send commands through the virtual port.



HID-POS settings

Bluetooth Interface

In this mode, the scanner outputs data to the host in Bluetooth transmission mode.

VID & PID Table

USB uses 2 numbers to identify the device and find the correct device. The first number is VID (Supplier ID), designated by USB Implementers Forum. The second number is PID (Device ID), and each interface type assigns a PID number.

Device Name	Interface Type	PID（Hex)	PID（Decimal)
Scanner	USB virtual serial interface	18d1	1009
	USB virtual keyboard	18d1	100b

Chapter 3 Scanning Mode

Manual Mode

In manual mode, when the trigger control interface of the scanner changes into trigger electrical level, the scanner will start to shoot and read. In the limited time of “single reading time”, the scanner will continuously shoot and read until it is successful. When trigger electrical level is canceled, or read is over the single read time limit, shooting and reading will be stopped. When read is successful, the scanner will output the editing content through communication interface. When start a new trigger read, the host needs to cancel the trigger electrical level at first, and then send the trigger electrical level after 20ms.

Manual Mode

Sense Mode

In automatic sensing mode, the scanner will monitor the images being taken. When the scene is changed, it will read within the limited time of “single read time”. After reading the output information successfully or time out, it will re-enter the state of monitoring scene change.

When the scanner works in this mode, it can also according to the trigger electrical level to enter the reading state. After the trigger electrical level is canceled or reading times out, it will re-enter the state of monitoring scene change. Before re-entering the monitoring state, the trigger electrical level needs to be canceled, then it will be switched to the sensing mode.

Sensing Automatically

Moving Performance：

PS：Ultra fast mode in the automatic sensing mode, the sensing distance of scanning paper barcode will decrease significantly.

Normal *

Fast

Ultra-fast

✧ Single Reading Time

In sensing reading mode, the parameter indicates the maximum time of allowing reading engine to continuously collect and identify barcode before reading successfully. After reading successfully or single read timeout, the reading engine will enter the interval of not collecting the read. The range of single read time is 0.1~9.9s, step length is 0.1s. When set to 0, the read does not wait. Default time is 1s. Please refer to the Chapter 7 for the setting method.

Continuous Mode

Continuous mode means that the scanner continuously shoots, reads and output the information. In this mode, the same barcode cannot be output.

Continuous

✧ Single Reading Time Limit

In continuous mode, it indicates the maximum time of scanner continuously collect and identify barcode before reading successfully. If it times out, it will enter the interval of not collecting and reading according to the setting. The code reading time is 100ms in units, which can be set to 0.1~9.9s. When it be set to 0 that indicates no waiting. Please refer to chapter 7 of the setting method.

Command Programming

In this mode, scanner needs the host to trigger and decode the barcode. The scanner can set the length of the reading time. The reading code time can be set to 0.1~9.9s. When it be set to 0 that indicates no wait. Please refer to chapter 7 of the setting method.

Chapter 4 Illumination and Aiming

Aiming

There is a projecting device on the scanner that is used to project a special image when reading, which characterizes the center of the scene image taken by the scanner. When the scanner is used for shooting, the image is projected on the reading target, and the scanner aims at the reading target, which makes it easier to read the target.

Normal: The aiming device will light up and project the image during the reading process, and the other times goes out.
No aiming: the aiming device is off and not projected.

Aiming OFF

Aiming ON*

Illumination

There is a fill illuminating device on the scanner that is used to illuminate the reading area when reading. It can be set to turn off and fill illuminating level. (Please refer to Chapter 7 for the lighting level setting)

Illumination ON*

Illumination OFF

Power on and Read Successfully Prompt Tone

The scanner can output PWM signal to drive the external buzzer circuit to make sound. The sound signal can be turned off or allowed to be output by setting. The corresponding settings can be made through the following setting codes.

Barcode Command Format

Length	Operand	Host/Slave	Permanent Command	Data	Checksum
Length	Operand	H/D	Status	Data	CRC
1 BYTE	1 BYTE	1 BYTE	1 BYTE	1 BYTE~250BYTE	1 BYTE

Length	operands + H/D + permanent command + data
Operand	The operand is the following command data
Host/Slave	Indicates whether this command is sent from the host or from the slave Host: 0x04 / Slave: 0x00
Permanent command	Indicates whether this command requires power-down save 0x08 requires power-down save 0x00 does not require power-down save
Data	Indicates parameter data carried by this command
Checksum	Check and algorithm: After all the previous data are added and reversed, take a low byte of 8 bits

Barcode Setting Format

Prefix	Operand	Data
5 BYTES	1 BYTE	1BYTE~250BYTE

Set barcode	Code 128 type Barcode
Prefix	Fixed prefix: +N+S-
Operand	The operand is the following command data
Data	Indicates parameter data carried by this command

General settings (default HID single scan mode)

Host mode (CDC, HID, BT, COM,HID-POS）

Operand: 0x41

	USB Virtual Serial Port	USB Keyboard	Virtual BT	General Serial Port	HID-POS
Data	0x02	0x01	0x03	0x04	0x05

Set scanner interface mode

Trigger mode (Single scanning, scanning continuously, auto sensing)

Operand: 0x42

	Button Trigger	Light continuously	Auto sensing
Data	0x00*	0x01	0x02

Set the scanning mode of the scanner

Default parameters (Restore factory settings)

Operand: 0x43

Data: 0x00

Restore to default parameters of factory settings.

Decoding timeout（0.1s~9s）

Operand: 0x44

	0.1s	0.2s	.....	9.7s	9.8s	9.9s
Data	0x01	0x02	.....	0x61	0x62	0x63*

When setting barcode reading, if the barcode is not read, it will stop reading the code time.

Data prefix

Operand: 0x52

	Disable	Custom Define
Data0	0x00*	0x01~0xfd
Data1	0x00	0x01~0xfd

Note:

1. If the character set to be *0x20*, you need to set the *data = 0xFE*.
2. If only one character is set, you need to set another to *0x00 Disable.*

Data suffix

Operand: 0x45

	Disable	Custom Define
Data0	0x00*	0x01~0xfd
Data1	0x00	0x01~0xfd

Note:

1. If the character set to be *0x20*, you need to set the *data = 0xFE*.
2. If only one character is set, you need to set another to *0x00 Disable.*
3. The default of *Data1* is *0x0a.*

Aiming device (ON/OFF)

Operand: 0x46

	ON	OFF
Data	0x01*	0x00

Illumination light (ON/OFF)

Operand: 0x47

	OFF	Level 1	Level 2	.....	Level 9	Level 10
Data	0x00	0x01	0x02	.....	0x09	0x0A

Data: When the level is 0, it is closed.

Multi code quantity

Operand: 0x4B

	OFF	2	3	.....	6	7
Data	0x00	0x02	0x03	.....	0x06	0x07

Set whether to start scanning multiple barcode modes at the same time and set the number of scanning barcodes simultaneously.

Baud rate of virtual serial port

Operand: 0x48

	115200	38400	19200	9600	4800	2400	1200
Data	0x00	0x01	0x02	0x03(Default)	0x04	0x05	0x06

Set serial port baud rate, this setting applies to USB virtual serial port and normal serial port only.

Check bit of virtual serial port

Operand: 0x49

	Non-Check	Odd Check	Even Check
Data	0x00(Default)	0x01	0x02

Set the check method of serial port.

Multi code quantity

Operand: 0x4B

	OFF	2	3	.....	6	7
Data	0x00	0x02	0x03	.....	0x06	0x07

Set whether to start scanning multiple barcode modes at the same time and set the number of scanning barcodes simultaneously.

Multi code sensitivity

Operand: 0x4C

	Level 1	2	3	.....	9	10
Data	0x00	0x01	0x03	.....	0x09	0x0A

Note: the higher the level, the stronger the ability to decode the double code, but the corresponding time to decode the single code will be longer.

Buzzer enables

Operand: 0x4D

Data	Power on Beep	Good read Beep
0x00	OFF	OFF
0x01(default)	ON	ON
0x02	OFF	ON
0x03	ON	OFF

The convert rate in HID mode

Operand: 0x4E

	Fast	Normal	Slow
Data	0x01	0x02*	0x0a

Timeout setting of the same barcode in non-single scan mode

Operand: 0x4F

	Variable
Data	0x00~0x63

Data:

0x00 indicates that there is no Timeout Invalid. If there is a barcode, it can still output.

0x01 indicates the timeout of 100ms.

0x63 indicates the timeout 9.9s.

Sensitivity

Operand: 0x51

	Normal	Fast	Ultra-Fast
Data	0x00*	0x01	0x02

Note: Ultra-fast mode in auto-sensing mode, the sensing distance of the scanning paper barcode will be reduced significantly.

Center aiming decode setting

Operand: 0x53

	Enable	Disable
Data	0x01*	0x00

Insert characters into barcode data

(up to 8 characters)

Operand: 0x5C

Data:

Data0 ~ data1: the position of the inserted data in the barcode data

Data2: data inserted in corresponding position (range: 0x01 ~ 0x7F)

Note: Data0 ~ data1

Calculation method: data0 = (x/64) +0x20 data1 = (x%64) +0x20, where x is the position of the character to be inserted (range: 1 ~ 6143).

When Data0 = 0x00, data1 = 0x00, clear all inserted data.

When Data0 = 0x00, data1 = 0x01~0x08, the insertion data of corresponding coordinates shall be cleared, and the coordinates shall be arranged in ascending order.

Compound command parameters

Operand: 0x5D

Data: Data0~dataN (range: 0 ~ N, N is any number)

Note: QR code is used for barcode type setting. Specific restart commands are not supported for composite commands, such as setting interface mode and restoring factory settings.

Specific command format:

Data0: specific command length, including command and command data

Data1: specific command

Data2 or data2 ~ data3: there are multiple command data setting commands in the specific command. Each specific command needs to be written according to the specific command format.

■ Commands that support only barcodes

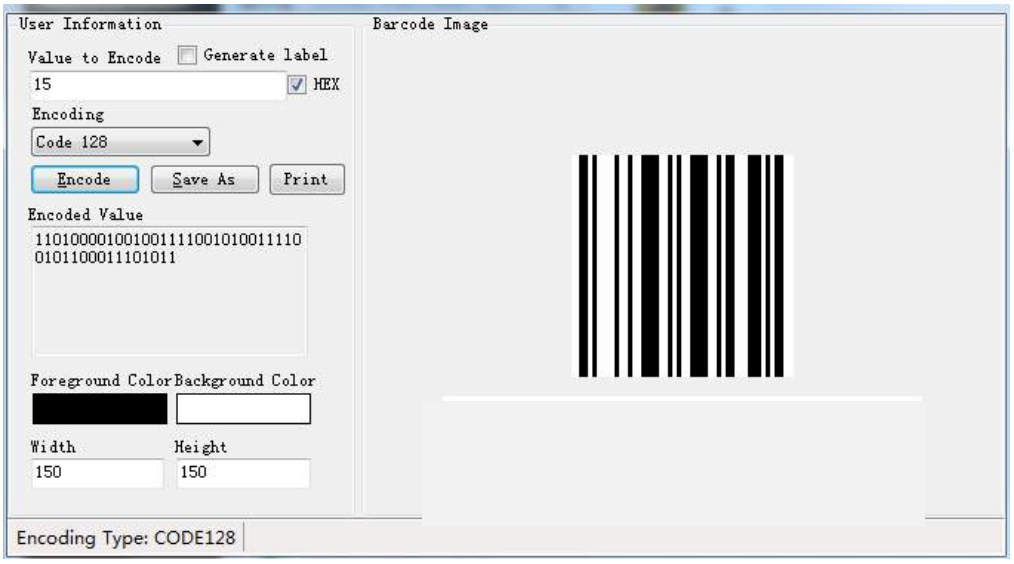
Set F1~F12 (only analog key output is supported)

Set the barcode content as follows:

Name	F1	F2	F3	F4	F5	F6	F7	F8	F9	F10	F11	F12
Value	0x16	0x17	0x18	0x19	0x1A	0x1B	0x1C	0x1D	0x1E	0x1	0x10	0x15

Users can directly write the appropriate data to generate the appropriate barcode, then scan the barcode can achieve the function of virtual key output.

Take the F12 function barcode as an example, write the following data to generate barcode.



Appendix Ⅰ Barcode Enabling Settings

Operand: 0x40

Data: 2BYTE data

Set the barcode enabling parameter, DATA 0 is the barcode parameter, DATA 1 is the barcode parameter variable.

The following is the parameter default value. 0 is OFF, 1 is ON

Barcode Type	Barcode Parameter		Parameter Variable	Default Status
	Decimal	HEX		
UPC-A	1	0x01	1	Enable
UPC-E	2	0x02	1	Enable
UPC-E1	3	0x03	0	Disable
EAN-8/JAN	4	0x04	1	Enable
EAN-13/JAN	5	0x05	1	Enable
Bookland EAN	6	0x06	0	Disable
ISSN EAN	7	0x07	0	Disable
code 128	8	0x08	1	Enable
GS1-128	9	0x09	1	Enable
ISBT 128	10	0x0A	1	Enable
Code 39	11	0x0B	1	Enable
Trioptic Code 39	12	0x0C	0	Disable

Convert GS1 DataBar to UPC/EAN	51	0x33	0	Disable
Code 128 Emulation	52	0x34	0	Disable

Appendix Ⅱ Data code prefix and suffix

E.g. Adding prefixes “@!”, steps:

Scan the setting barcode【open prefix 1】--> Scan the setting barcode【@】 Scan the setting barcode【open prefix 2】--> Scan the setting barcode【!】

The detailed barcode is set as follows:

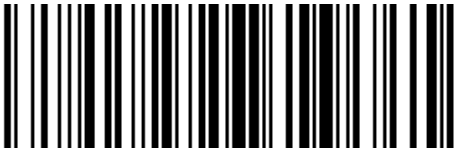
Open prefix 1

Clear prefix 1

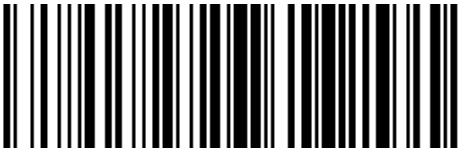
Open prefix 2

Clear prefix 2

Clear all prefix data



Open suffix 1



Clear suffix 1

Open suffix 2

Clear suffix 2

Clear all suffix data

Appendix Ⅲ ASCII Code Table

Hexadecimal	Decimal	Character
00	0	NUL （Null char.）
01	1	SOH （Start of Header）
02	2	STX （Start of Text）
03	3	ETX （End of Text）
04	4	EOT （End of Transmission)
05	5	ENQ （Enquiry）
06	6	ACK （Acknowledgment）
07	7	BEL （Bell）
08	8	BS （Backspace）
09	9	HT （Horizontal Tab）
0a	10	LF （Line Feed）
0b	11	VT （Vertical Tab）
0c	12	FF （Form Feed）
0d	13	CR （Carriage Return）
0e	14	SO （Shift Out）
0f	15	SI （Shift In）
10	16	DLE （Data Link Escape）
11	17	DC1 （XON） （Device Control 1）
12	18	DC2 （Device Control 2）
13	19	DC3 （XOFF） （Device Control 3）
14	20	DC4 （Device Control 4）
15	21	NAK （Negative Acknowledgment）
16	22	SYN （Synchronous Idle）
17	23	ETB （End of Trans. Block）
18	24	CAN （Cancel）
19	25	EM （End of Medium）
1a	26	SUB （Substitute）
1b	27	ESC （Escape）
1c	28	FS （File Separator）
1d	29	GS （Group Separator）
1e	30	RS （Request to Send）
1f	31	US （Unit Separator）
20	32	SP （Space）

21	33	! （Exclamation Mark）
22	34	" （Double Quote）
23	35	# （Number Sign）
24	36	$ （Dollar Sign）
25	37	% （Percent）
26	38	& （Ampersand）
27	39	` （Single Quote）
28	40	(（Right / Closing Parenthesis）
29	41	) （Right / Closing Parenthesis）
2a	42	* （Asterisk）
2b	43	+ （Plus）
2c	44	, （Comma）
2d	45	- （Minus / Dash）
2e	46	. （Dot）
